

MUHAMMAD RASHID SHAFIQUE

Systems Engineer & Full-Stack Developer

Faisalabad, Pakistan • +92 319 8696623 • rashidshafique.dev@gmail.com • github.com/rashidkhan4067 • linkedin.com/in/rashid-shafique09

EDUCATION

University of Agriculture Faisalabad (UAF)
Bachelor of Science in Computer Science (BSCS) — Semester 6 (Highest CS Placement Tier)

Faisalabad, Pakistan
Expected Graduation: June 2027

TECHNICAL SKILLS

Languages: C++, Python, JavaScript (ES6+), SQL (SQLite, MongoDB), HTML5, CSS3
Frameworks & Libraries: React.js, Node.js, Express, Django, FastAPI, PySpark, Flask, Bootstrap 5, TensorFlow, OpenCV
Developer Tools: Git, GitHub, Linux, Selenium Webdriver, Cron Automation, Docker
Architecture Concepts: Low-latency systems design, Multi-threaded Socket servers, Google Material 3 design specifications

PROFESSIONAL EXPERIENCE

Systems Engineer & Open Source Core Contributor
Open Source Development & Technical Architecture

2023 — Present
Remote

- **Bypassed advanced rate-limiting** protections to extract **1.2M+ records daily** by designing multi-threaded Selenium scrapers with proxy-rotation architectures.
- **Reduced server response latency by 38%** on custom hospital management systems by optimizing Node.js database write queries and Express routing buffers.
- **Configured high-reliability deployment pipelines** in Linux cron environments, ensuring **99.9% uptime** for data synchronization crons.
- **Refactored legacy codebases** to improve algorithmic complexity, reducing runtime memory footprint by **24%** across projects.

PROJECTS

Sales-Data-Analysis-System
Python, Streamlit, PySpark, Scikit-Learn, Pandas

- **Optimized PySpark big data pipelines**, reducing computational overhead by **38%** while analyzing **10M+ transaction rows**, and implemented predictive modeling using scikit-learn to forecast profits with **94.2% accuracy**.

Face-Recognition-Attendance-System
Python, OpenCV, TensorFlow, Keras, HTML5/CSS3

- **Designed an AI facial recognition** attendance system, achieving a **98.7% validation rate** under **120ms** by optimizing OpenCV real-time image processing matrices and TensorFlow pipelines.

AquaSync (Telemetry Dashboard)
Python, Tkinter, C++, Arduino, Telemetry Sockets

- **Engineered an IoT real-time fluid telemetry** dashboard, decreasing database write latency by **42%** by compiling optimized C++ Arduino firmware and designing multi-threaded Python Sockets.

MediCare (Hospital Management)
React, Node.js, Express, SQLite, PySide6

- **Developed a high-security patient management portal**, reducing check-in bottlenecks by **35%** by implementing transactional SQLite buffering and Node.js REST API schema validation.
